

# TalentLens AI Candidate Ranker

- Hybrid recruiter-grade ranking for AI roles
- Uses dataset + job description to build a shortlist
- Includes semantic matching and recruiter signals

# What it does

- Reads job description from data/job\_description.docx or .txt
- Computes candidate fit using embedding similarity
- Scores title, skills, history, deployment, and signals
- Exports ranked output in output/submission.csv

# Why this approach

- Semantic embeddings let the system understand fit beyond keywords
- Hybrid scoring adds practical recruiter signals and JD alignment
- Produces a shortlist recruiters can trust and inspect quickly

# How to run

- Install backend requirements: `python -m pip install -r Backend/requirements.txt`
- Run ranking: `python Backend/src/rank_candidates.py`
- Preview dashboard: `npm run preview` in `ai-candidate-ranker`
